

See the recall before your money moves.

Buying a used crib or car seat from a stranger? Lullabuy holds a Visa payment until a camera reads the item's label. Recalled or banned: the hold is reversed. Clean: the seller is paid. Nobody takes the risk home.

Why

About 100 babies died in Fisher-Price Rock 'n Play sleepers, at least 8 after the recall (CPSC, Jan 2023). Consumer Reports found 50 of the first 65 Facebook Marketplace listings it reviewed were banned infant sleepers (2026). Marketplaces filter the text they can read. Nobody reads the label when the money changes hands.

How it works

1. Find it. Say what you need. Gemini searches 1,662 real listings; every result is pre-screened, red ones cannot be bought.
2. Agree and hold. Card typed into Visa Acceptance Microform; authorized with capture off. An AI agent buying for you signs with the Trusted Agent Protocol.
3. Meet and scan. One photo: barcode, Gemini reads the label, our model checks the product type on the phone.
4. Capture or reverse at Visa, spoken by ElevenLabs.

The code

Check any model number yourself

```
curl "https://secondhand-safe-web.vercel.app/api/check?model=BHC001&batch=202408"
```

Also an MCP tool (recall_check at /api/mcp) for any AI shopping agent. Never says "safe": no match means no match as of the index date.
